

**SANTA FE COUNTY
PROFESSIONAL SERVICES AGREEMENT
WITH AQUATIC CONSULTANTS, INC.
TO PROVIDE LAKE ASSESSMENT SERVICES**

THIS AGREEMENT is made and entered into this 12 day of April, 2011 by and between Santa Fe County, hereinafter referred to as “the County”, and Aquatic Consultants, Inc., a New Mexico Corporation with a principal address located at 4421 Irving Blvd., NW, Albuquerque, NM 87114, hereinafter referred to as “the Contractor”:

WHEREAS, pursuant to NMSA 1978, Section 13-1-125, this is a “small purchase,” for the provision of the professional services; and

WHEREAS, the County desires to engage the Contractor to provide lake assessment at the Santa Fe County Fire Department Training Facility, and the Contractor is willing to render such services; and

WHEREAS, the County requires these services and the Contractor is willing to provide these services and both parties wish to enter into this Agreement.

NOW THEREFORE, in consideration of the premises and mutual obligations herein, the parties hereto do mutually agree as follows:

1. SCOPE OF WORK

The Contractor shall collect valuable information that will allow it to make recommendations for improving the health and functionality of the training lake, as well as a plan for improvements and future management. The following components shall be included in the assessment:

Lake History: Contractor will meet with county staff prior to conducting field work to obtain information to compile a report of the history of the lake, as well as the County’s plans for use of the lake.

Lake Mapping: The perimeter of the lake will be mapped with Trimble GPS to determine surface area. Contractor will transect the lake in a boat to map the bottom contours with sonar, which is simultaneously related to GPS points to provide an accurate depiction of the water body. Contractor will determine lake volume. Contractor will pinpoint potential problem areas in the lake.

Water Quality: Contractor will measure several water quality parameters on site, including pH, Hardness and Alkalinity. In addition, water samples will be collected and sent to a laboratory to measure Nitrates, Phosphates, Potassium, and various other parameters that are important to understanding overall water quality. Dissolved oxygen and temperature profiles will also be measured to determine the extent of stratification in the lake. Contractor will also evaluate the water quality of the water source, if necessary.

Water Clarity: Water clarity (turbidity) will be measured using a secchi disk. From the measurement of water clarity and an evaluation of water color Contractor will determine the severity of phytoplankton growth in the lake.

Aquatic Vegetation: Vegetation in the lake will be broadly identified and vegetation coverage will be estimated so that Contractor can make the proper recommendations for chemical or biological treatment (if necessary), fish stocking (e.g. grass carp), and aeration placement.

Sedimentation/Sludge: The extent of sedimentation and/or sludge build-up will be measured at various locations within the lake. Contractor shall make recommendations for necessary sludge removal and for reducing the potential for sludge build-up in the lake.

Bank Stabilization: Bank stabilization will be measured at various locations in the lake to determine if vegetation is compromising shoreline stability (e.g. tree growth) or if there are safety issues related to the stability of the banks.

Deliverables: Data obtained from the scope of work detailed above will be compiled into a comprehensive report of Contractor's findings. These findings will be used to provide the County with recommendations concerning improvement to the lake, including estimated costs for proposed work.

Schedule: Lake Assessment – Field Work – 1 day
Data Analysis and Report Writing – 2 weeks.
